

Elevate Application Experience in Nutanix

Kemp Virtual LoadMaster for Nutanix is an elastic, resilient, and cost-effective load balancer and application delivery controller (ADC) that simplifies the challenge of delivering applications at scale. Kemp LoadMaster includes centralized management and control to simplify the deployment and lifecycle management of load balancer instances in dynamic environments.

SOLUTION ARCHITECTURE / HOW IT WORKS

LoadMaster virtual load balancer/ADC instances can be deployed on-demand to meet changing application requirements and may be configured as high-availability pairs to deliver resilience. LoadMaster may be licensed as individual fixed capacity instances or via Metered Licensing. With a Metered Licensing subscription, there is no restriction on the number of instances deployed with aggregate usage being billed monthly. Regardless of the licensing method, LoadMaster delivers a feature rich load balancing environment and includes templates for all the major application workloads to simplify deployment.

KEY SOLUTION BENEFITS

Kemp helps deliver end-to-end solutions for customer's critical business applications. The main benefits of the solution are:

- Kemp LoadMaster enables scalable and highly available application deployment with a variety of scheduling methods, application health checking, intelligent content switching and SSL/ TLS acceleration.
- Metered Licensing fits perfectly with Nutanix AHV as you only pay for what you use and have the flexibility to scale within a single load balancer instance or to scale using multiple instances.
- Metered Licensing includes the option to enable a Web Application Firewall (WAF) on all load balancers and provide daily rule updates.

CUSTOMER QUOTE

“Scalability has been critical for our success over the past few years. With a solid line of load balancers behind us, we can focus on growing the business without worrying about whether or not our infrastructure could handle the increased users and applications. Kemp has helped us to keep this competitive advantage.” – Infinite Campus

ABOUT KEMP

With over 60,000 worldwide deployments and offices in America, Europe, Asia, and South America, Kemp is the industry leader in advanced Layer 4 – 7 application-centric load balancers and application delivery controllers (ADCs). Since 2000, Kemp has been a consistent leader in innovation with several industry firsts, including high performance ADC appliance virtualization, application-centric SDN and NFV integration, innovative pricing and licensing models and true platform ubiquity that can scan to support enterprises of every size and workload requirement.

ABOUT NUTANIX

Nutanix makes infrastructure invisible, elevating IT to focus on the applications and services that power their business. The Nutanix enterprise cloud platform leverages web-scale engineering and consumer-grade design to natively converge compute, virtualization and storage into a resilient, software-defined solution with rich machine intelligence. The result is predictable performance, cloud-like infrastructure consumption, robust security, and seamless application mobility for a broad range of enterprise applications.
